

```
<script>  
| import { t } from "translation-library"  
</script>
```

```
{t("hello_world")}  
{$t("hello_world")}  
{t("hello_world", { name: "John" })}
```

```
import { registerMessages } from "translation-library"

import en_home from "./messages/home.en.json"
import en_about from "./messages/about.en.json"
import de_home from "./messages/home.de.json"
import de_about from "./messages/about.de.json"

registerMessages("en", "home", en_home)
registerMessages("en", "about", en_about)
registerMessages("de", "home", de_home)
registerMessages("de", "about", de_about)

//start using messages
```

```
import { registerMessages, load } from "translation-library"

registerMessages("en", "home", async () => await import("./messages/home.en.json"))
registerMessages("en", "about", async () => await import("./messages/about.en.json"))
registerMessages("de", "home", async () => await import("./messages/home.de.json"))
registerMessages("de", "about", async () => await import("./messages/about.de.json"))

await load("en", "home");

//start using messages
```

Basically every i18n Library

```
import { registerMessages } from "translation-library"

import en_home from "./messages/home.en.json"
import en_about from "./messages/about.en.json"
import de_home from "./messages/home.de.json"
import de_about from "./messages/about.de.json"

registerMessages("en", "home", en_home)
registerMessages("en", "about", en_about)
registerMessages("de", "home", de_home)
registerMessages("de", "about", de_about)

//start using messages
```

```
<script>
| import { t } from "translation-library"
</script>

{t("hello_world")}
{$t("hello_world")}
{t("hello_world", { name: "John" })}
```

```
import { registerMessages, load } from "translation-library"

registerMessages("en", "home", async () => await import("./messages/home.en.json"))
registerMessages("en", "about", async () => await import("./messages/about.en.json"))
registerMessages("de", "home", async () => await import("./messages/home.de.json"))
registerMessages("de", "about", async () => await import("./messages/about.de.json"))

await load("en", "home");

//start using messages
```
