

Drawbacks

- No reactivity

```
<script>  
  export let data;  
</script>  
  
{#key data.lang}  
  <slot />  
{/key}
```

- Lazy loading locales is awkward

You might not need to lazy load

```
const x = "en";  
let $ = () => x;  
const v = (e) => `Welcome ${e.name}! You have ${e.count} messages.`,  
      T = (e) => `Hallo ${e.name}! Du hast ${e.count} Nachrichten.`,  
      y = (e, t = {}) => ({ de: T, en: v }[t.languageTag ?? $()](e))
```
