Internationalised Routing in SvelteKit
Detecting the Language on the Server

```js
/**
 * @param {import("@sveltejs/kit").RequestEvent}
 * @returns {string}
 */
function getLanguage(event) {
    return event.params.lang ?? sourceLanguageTag
}

export async function handle({ event, resolve }) {
    event.locals.lang = getLanguage(event)
    return resolve(event);
}
```

Internationalised Routing in SvelteKit
Changing all the links

```html
<a href="{$page.data.lang}/users/create">
    {m.create_user()}
</a>
```

```javascript
function goToAbout() {
    return await goto(`${$page.data.lang}/users/create`)
}
```

```javascript
redirect(302, `${event.locals.lang}/users`)
```
